Reference is made to the following documents:

D1: EP 1246057 A2

D2: US 6209131 B1

Document D1 relates to a remote program downloading system for remotely rewriting software installed into an apparatus connected to a network via a digital transmission path.

D2 describes an apparatus and a method for displaying program guide information in a display device, and more particularly to an apparatus and method for processing additional information in a display device, which are capable of when a scheduled program has been changed, automatically detecting such a situation and notifying a viewer of the change.

The object of the invention is to solve the problem which occurs when sessions transmitted through a network are updated.

Claim 1-74

From D1 a system is known (see abstract and paragraphs 8-37), where program data is generated by configuring a plurality of modules based on a relationship between dependence of the modules composing the program. Then, generated two versions of program data is compared starting from a head address of each of the program data, and data at an address, and thereafter, where the data first makes a difference is extracted to generate difference data. Further, a centre holds the latest version of program and at least one item of difference data,

and transmits the whole data of program or difference data corresponding to a program version in a terminal apparatus, and the program is updated in the terminal apparatus using the received data.

The terminal can choose to update the data voluntarily (selectively) or the centre can update the data in the terminal automatically (paragraph 62).

D2 describes an apparatus and a method for displaying program guide information in a display device, and more particularly to an apparatus and method for processing additional information in a display device, which are capable of when a scheduled program has been changed, automatically detecting such a situation and notifying a viewer of the change (see abstract).

However, The cited documents represent the general state of the art.

The invention defined in claims 1-74 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed method, computer program, apparatus and system for updating session announcements via separate sets as described in these claims.

Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-74 is novel and is considered to involve an inventive step. The invention is industrially applicable.
